

Figure A. Orbium (S001) survival boundary under four standardised disturbances**a Where the smallest lethal edit lands on the body****b Every tested edit on one mass axis: survival flips in a narrow band whose position depends on where mass goes****c All-or-nothing: mass after the edit for the two runs either side of each edge****d Zoom on each edge: a second lane's code agrees; resolution barely moves it; a finer timestep moves I003 and I004**
