

Figure D. When together is worse, and the creature that eventually disappears**PROVISIONAL: evidence from unmerged PR #27 (Lane 6) @ 3ccb804 and PR #30 (Lane 7, HR-009) @ 9fc48b4.****The new findings are proposed claims, not ledger entries. Ledger statuses (C038, C041) checked against research/claims.md @ 76ee3a6.****a S101 under port injury (I004): an ordinary response (cells: Orbia alive at the end)**

Pair = partners alone in 58 of 60 runs: the uninjured partner survives on its own (L6-008 I004: H0). The 2 dashed mismatches at s 0.05 are the split half being fragile; a lone, relaxed Orbius survives 0.05 (Lane 4, L4-002).

b S101 under frontal addition (I003): together is worse, but only at s 0.2-0.3**c, d S102, the circler at its registered rule: a chaotic transient with a spread of lifetimes, not one death time**
