

Figure C. Several phenotypes under one rule: what is observed, and how far it is checked

PROVISIONAL: evidence from Lane 6's unmerged PR #11 @ f40f303; one lane, no second-lane reproduction yet.  
Claim statuses checked against research/claims.md @ 76a8dc9.

**b Resolution and timestep checks: the coexistence band moves, and at R 26 the circler's own rule falls outside it**

**c At the coexistence rule ( $\mu 0.155, \sigma 0.020$ ): persistence is not the same as a verified attractor**

|                       | persistence at the coexistence rule (one lane) |                   |                     | same lane, stronger tests  |                                            | independent            |                  |
|-----------------------|------------------------------------------------|-------------------|---------------------|----------------------------|--------------------------------------------|------------------------|------------------|
